

NGAC P907-01 is a fast curing epoxy adhesive formulated for terminating single or multi-mode fiber optic connectors. It provides extremely good impact and thermal shock resistance, and yields excellent low stress, pot-and-polish connections which do not piston during cycle tests.

NGAC P907-01 is highly resistant to moisture and weathering, gases, petroleum products and other organic and inorganic compounds. It exhibits good wicking, and develops strong, tough, mechanically stable bonds to a wide variety of fiber optic and optical materials including most metals, ceramics, glass and plastics. It can be cured as quickly as 1 minute at 150°C and is **GR -326 certified**.
