

NGAC P907-04 is a room temperature curable epoxy adhesive specifically formulated for fiber optic terminations. This low viscosity adhesive has qualified for termination of single-mode and multi-mode fiber optic connectors, as well as, bonding prisms and lenses. It has also been used for bonding LED displays, lenses and other optical components.

NGAC P907-04 provides exceptional wicking and wetting of the fibers, along with superior adhesion strength to glass and other low surface energy substrates. It turns a blue color after cure which will facilitate the polishing process. With the ability to cure completely at room temperature, this product is used extensively in field termination kits.
